

Asset Ensurity

Protects and ensures recovery of premium goods

Asset Ensurity is a small GPS tracker that can be embedded in high-value items like luxury handbags and fragrances. It automatically activates when motion is detected, relaying the exact location in real time.

How it works

- Place Asset Ensurity with regular merchandise**
Place a product embedded with Asset Ensurity with others of its kind
- Use our simple web interface to monitor and set alerts**
We create a geofence around your store, warehouse, or any other location and as long as it's inside that geofence, Asset Ensurity will not be triggered
- In case of a burglary or robbery**
Or any suspicious activity, get instant texts & emails on your pre-configured channels
- Our 24/7/365 monitoring center jumps into action**
We'll call you to confirm what happened and will dispatch law enforcement accordingly
- Recovery**
Aided by Asset Ensurity's pin-point accuracy law enforcement officers will be able to apprehend the suspect(s) and recover stolen goods

With our unique ONE-CLICK tracking, there's no need to download additional software or login to a website to track a moving device. Just click on the link and see the perpetrator's movements live on any screen.

This is immensely useful in chase scenarios where every second counts. The link can be shared with multiple personnel instantaneously and everyone can begin tracking the target.

Features

- Customizable form-factor
- Configurable trigger options, location update frequency, and 'device online' ping rates
- Stores location data even if the cellular signal is lost during tracking
- No employee training required
- All data stored for evidential purposes
- Text and email notifications
- 24/7/365 monitoring from our UL listed, TMA 5-Diamond facility
- Reliable after-sales service and customer support

Asset Ensurity uses **CAT M1**, a 4G technology which draws significantly less power than conventional cellular standards. This, along with an auto-sleep mode to conserve battery in idle situations, allows the device to last for years on a single charge.

Recharge wirelessly with the inductive charging pad (standard) or via any USB wall adapter.
