

E-Pursuit

A trusty tool for aiding law enforcement operations

Out in the field, officers need the best available technology to effectively track & pursue a suspect and recover stolen property. E-Pursuit delivers this critical advantage. It can be hidden in bait or decoy objects or attached to vehicles to get real-time GPS tracking.

How it works

- Hide E-Pursuit in the object that needs to be tracked**
Its small size makes it perfect for planting on decoy or bait items.
- Use our simple web interface to monitor and set alerts**
Setup triggers and notification preferences.
- When the crime occurs**
Get instant texts & emails on your pre-configured channels.
- Pursue and Apprehend**
Access full tracking information via our unique one-click tracking.

With our unique ONE-CLICK tracking, there's no need to download additional software or login to a website to track a moving device. Just click on the link and see the perpetrator's movements live on any screen.

This is immensely useful in chase scenarios where every second counts. The link can be shared with multiple personnel instantaneously and everyone can begin tracking the target.

Features

- AES-256 data encryption
- Customizable form-factor
- Magnetic mount for attaching to vehicles (optional)
- Configurable trigger options, location update frequency, and 'device online' ping rates
- Stores location data even if the cellular signal is lost during tracking
- All data stored for evidential purposes
- Text and email notifications
- Reliable after-sales service and customer support

E-Pursuit uses **CAT M1**, a 4G technology which draws significantly less power than conventional cellular standards. This, along with an auto-sleep mode to conserve battery in idle situations, allows the device to spend an incredible amount of time in the field on a single charge.

Recharge wirelessly with the inductive charging pad (standard) or via any USB wall adapter.
