

Phone Ensurity

Protects and ensures recovery of electronic goods.

Phone Ensurity is a small tracker that is hidden inside OEM packaging. The final product is indistinguishable from the genuine article. Even on opening the box, there is no giving away of the tracker's presence.

How it works

- Place Phone Ensurity with regular devices**
Phone Ensurity looks like any other packaged smartphone, tablet or other digital device. Place it with others of its kind, and it will blend right in.
- Use our simple web interface to monitor and set alerts**
We create a geofence around your store, warehouse, or any other location and as long as it's inside that geofence, Phone Ensurity will not be triggered.
- In case of a burglary or robbery**
Or any suspicious activity, get instant texts & emails on your pre-configured channels.
- Our 24/7/365 monitoring center jumps into action**
We'll call you to confirm what happened and will dispatch law enforcement accordingly.
- Recovery**
Aided by Phone Ensurity's pin-point accuracy law enforcement officers will be able to apprehend the suspect(s) and recover stolen goods.

With our unique ONE-CLICK tracking, there's no need to download additional software or login to a website to track a moving device. Just click on the link and see the perpetrator's movements live on any screen.

This is immensely useful in chase scenarios where every second counts. The link can be shared with multiple personnel instantaneously and everyone can begin tracking the target.

Features

- Customizable form-factor
- Configurable trigger options, location update frequency, and 'device online' ping rates
- Stores location data even if the cellular signal is lost during tracking
- No employee training required
- All data stored for evidential purposes
- Text and email notifications
- 24/7/365 monitoring from our UL listed, TMA 5-Diamond facility
- Reliable after-sales service and customer support

Phone Ensurity uses **CAT M1**, a 4G technology which draws significantly less power than conventional cellular standards. This, along with an auto-sleep mode to conserve battery in idle situations, allows the device to last for years on a single charge.

Recharge wirelessly with the inductive charging pad (standard).
